

# Description

The `parseInt` method parses a value as a string and returns the first integer.

A radix parameter specifies the number system to use:

2 = binary, 8 = octal, 10 = decimal, 16 = hexadecimal.

If radix is omitted, JavaScript assumes radix 10. If the value begins with "0x", JavaScript assumes radix 16.

## Syntax

```
parseInt(string, radix)
```

## Parameters

Parameter	Description
<i>value</i>	Required. The value to be parsed.
<i>radix</i>	Optional. Default is 10. A number (2 to 36) specifying the number system.

## Return Value

Type	Description
A number.	NaN if no integer is found.
